DETAILED ACTION

This Office action is responsive to communication received 08/13/2003 – application papers; 06/03/2004 – Revocation and new power of attorney.

This application is a CIP of 10/250,070, filed 06/02/2003, which is a CIP of 10/248,342, filed 01/10/2003.

Claims 1-30 are pending.

Following is an action on the MERITS:

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 10/250,070 in view of Chiuminatta, Tunstall. Specific to claim1-4, the claimed invention of the '070 application differs from the instant claims in that the claimed invention of the '070 application lacks a plurality of trailing weight members, a plurality of first side wall weight members and a plurality of second side wall weight members, whereby the swing weight of the putter may be adjusted by preselecting

Art Unit: 3711

weight members from the plurality of trailing weight members and said first and second side wall weight members. It is rather common especially in the golf club putter art to strategically place weight adjacent the perimeter of a putter head body in order to increase the mass moment of inertia such that off-center shots are less likely to cause club head rotation upon impact of the striking face with a golf ball. Moreover, it s common to provide for a plurality of weighting members at various locations on a putter head in order to customize the swing weight of the putter to suit the individual needs of each golfer. By way of example, note the language in the patent to Tunstall which discusses that the swing weight of a putter head may be adjusted in order to provide proper balance and weight distribution as determined by a golfer (col. 2, line 64 through col. 4, line 38). The patent to Chiuminatta discusses the importance of adjusting the swing weight of a putter in order help correct for a golfer's stroke deficiencies. Chiuminatta further details that the location of the center of mass of a putter head may be adjusted by varying the swing weight (col.1, lines 53-63 and col. 2, line 67 through col. 3, line 14). In view of the above reasoning and the patents to Tunstall and Chiuminatta, it would have been obvious to modify the claimed device in the '070 application by including a plurality of trailing weight members, a plurality of first side wall weight members and a plurality of second side wall weight members, the motivation being to desirably alter the weight distribution of the head. As to instant claim 2, see claim 2 of the '070 application. As to instant claim 3, see claim 3 of the '070 application. As to instant claim 4, see claim 4 of the '070 application.

Art Unit: 3711

Claims 5-20 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/250,070 in view of Chiuminatta, Tunstall and Finney. This is a provisional obviousness-type double patenting rejection. The modified claimed invention of the '070 application differs from the instant invention in that the modified claimed invention of the '070 application lacks a recitation of a moment of inertia ranging from as low as about 4390 gm cm² to as high as 14,500 gm cm² with various swing weights for the putter head body, as required by the instant claims. Finney recognizes that the moment of inertia may in theory exceed 12,000 gm cm² and provides a detailed analysis of the reasons for why the inertia value changes depending upon the size of the club head and the materials selected for the club body and the weighting material. See col. 5, lines 14-24 and the section styled "OPERATION OF THE INVENTION", beginning at col. 13 in Finney. It would appear that Finney has indicated a result-effective relationship among the dimensions comprising the club head size along with the weight of the club head and their effect on the value of the moment of inertia. Where a parameter optimized is recognized as being result-effective, that optimization is normally considered an obvious matter to one having ordinary skill in the art. See In re Antonie, 559 F.2d 618, 195 USPQ 6 (CCPA 1977); In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955). Under the circumstances here, the instant claimed dimensions for moment of inertia involve no more that the optimization of a resulteffective variable and would have been obvious to one having ordinary skill in the art, based on the teachings of Finney. In addition, applicant's recitation in the instant claims

Art Unit: 3711

that the swing weight vary with a change in shaft length is not novel or unobvious. Club sets are often arranged so that the swing weight of a particular club in the set varies with the length of the club shaft.

Enclosed with this Office action is a sample terminal disclaimer which is effective to overcome a provisional obviousness-type double patenting rejection over a pending application (37 CFR 1.321(b) and (c)).

Also enclosed is a sample Statement Under 37 CFR 3.73(b) (Form PTO/SB/96) which an <u>assignee</u> may use in order to ensure compliance with the rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The "Copies of assignments..." box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the "Copies of assignments..." box is checked, either the part A box or the part B box, as appropriate, must be checked, and the "Reel_____, Frame_____" entries should be left blank. If the part B box is checked, and copies of assignments are not included, the "From:_____ To:_____ " blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b), e.g., when signing a terminal disclaimer or a power of attorney.

Applicant's attention is further drawn to the claims of copending application serial number 10/248,342. Applicant is urged to maintain a clear line of demarcation between the instant claims and the claims in the '342 application in order to avoid the need to address concerns over obviousness-type double patenting during prosecution of the instant application.

All references cited during prosecution of applicant's parent applications are deemed pertinent to this instant application and are incorporated herein by reference.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sebastiano Passaniti whose telephone number is 703-308-1006. The examiner can normally be reached on Mon-Fri (6:30-3:00).

Art Unit: 3711

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 703-308-1513. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
